

Small Baby Care Specialist® (SBCS) Program Customization

The Small Baby Care Specialist® Program provides an evidence-base review for care of the preterm neonate and their family. If your NICU purchases at least 30 licenses to complete the Program, you can add content which represents the context of your NICU making the Small Baby Care Specialist® Program more specific to your NICU.

Customizable content can include any presentation or video, for example it's a great opportunity to share your NICU data and how it compares to national benchmarks. You might consider adding a short video on why you are completing this program as an interdisciplinary team (your goals). Any documents (Word, PowerPoint, or PDF) can be uploaded to the Program such as: protocols, checklists, guidelines or algorithms you have developed to guide your care of the small baby.

Having a customized Program allows your center to complete the Program in a "classroom" that is only open to members of your interdisciplinary team. This allows your team to utilize the COMMENTS sections that follow each presentation to discuss as a team any ideas for practice change or quality improvement strategies.

There is also an opportunity to add assignments. Perhaps you would like your team to submit an idea for process improvement or identify an opportunity. These can be added as well.
